

Protex Ultra and Protex Spray are included on EPA's N list for disinfectants effective against Covid 19. The following information is from the EPA website:

*When purchasing a product, check if its **EPA registration number** is included on the list. If it is, you have a match and the product can be used against SARS-CoV-2. You can find this on the product label – just look for the EPA Reg. No. These products may be marketed and sold under different brand names, but if they have the same EPA registration number, they are the same product.*

The primary products included on our list may have more recognizable brand names, but there are often “distributor products” that are identical to them.

Although distributor products frequently use different brand names, you can identify them by their three-part EPA Reg. No. The first two parts of the EPA Reg. No. match the primary product. A third set of numbers represents the Distributor ID number. For example, EPA Reg. No. 12345-12-2567 is a distributor product with an identical formulation and efficacy to the primary product with the EPA Reg. No. 12345-12. If EPA Reg. No. 12345-12 is on our list, you can buy EPA Reg. No. 12345-12-2567 and be confident you're getting the same thing.
